

H-FORMS PRODUCT DETAILS

H-BASE COAT (Item 5 on website): The base stucco coat to all H-Coat (Non H-TopCoat) applications or for paint applications, as well as a base for veneers, such as rock, stone & brick, etc.

For lightweight masonry veneers such as brick and stone, apply two 1/8" coats of H-Base with H-Mesh-4 embedded in the first coat, let it dry and before applying veneer with mortar, fog down the base and mix h-Acryl in with the mortar to 1 quart per 100 lbs of mortar.

For heavier stone and full brick finishes, apply H-Base in the same way but use masonry ties as per manufacturer's specifications by piercing ICF block wall with a key-hole saw and inserting a masonry tie so it sticks out into the concrete cavity for the concrete to "grab" it when placed.

H-TOP COAT (Item 7 on website): H-FORMS standard or custom color coat with rough to smooth textures. Our finish color coat can be any texture you want. Ask your local stucco expert to advise you on your needs.

***H-TOP COAT SMOOTH** is a similar product with lighter fines for a very smooth finish but requires 2 coats

H-ACRYL (Item 9 on website): Acrylic additive for H-Proof and H-Top Coat
